

Lightning web component

LWC - Modern Web Stack

More standards, less frameworks

LWC - New Programming Model

Introducing Lightning Web Components

Increased performance & productivity

contactForm.js

```
import { LightningElement, api, track } from 'lwc';

export default class ContactForm extends LightningElement {

  @api recordId;
  @api objectApiName;
  @track fields = ['Name', 'Title', 'Phone', 'Email'];

}
```

contactForm.html

```
<template>

  <lightning-card title="Contact" icon-name="standard:contact">

    <lightning-record-form object-api-name={objectApiName} record-id={recordId}
      fields={fields}></lightning-record-form>

  </lightning-card>

</template>
```

The result:

Contact
